

Example Tools

VMA Analysis Tools – AnalytiX & VMAlytic

Alfred Bach

Principal Technical Instructor

What Is AnalytiX?

- ▶ Local web app for VMA assessments
- ▶ Converts RVTools exports to Word reports
- ▶ In-browser preview and download
- ▶ All processing runs on your machine

Why AnalytiX?

- ▶ RVtools data is raw and complex
- ▶ VMA needs a customer-ready brief
- ▶ Manual report writing is slow
- ▶ Automates discovery documentation

Key Features

- ▶ Accepts RVTools .xlsx and .xlsm files
- ▶ Generates structured Word (.docx) reports
- ▶ Web UI with preview and download
- ▶ CLI mode for batch processing

How It Works

Processing Workflow

- ▶ 1. Upload RVTools export folder
- ▶ 2. Validate spreadsheet data
- ▶ 3. Generate Word report locally
- ▶ 4. Preview and download in browser

Project Components

- ▶ `analytx_server.py` – FastAPI web server
- ▶ `analytx_report.py` – report generation core
- ▶ `static/index.html` – browser user interface
- ▶ `windows/` and `unix/` – setup scripts

Privacy and Security

- ▶ Listens on 127.0.0.1 by default
- ▶ No external data transmission
- ▶ Network only needed for pip install
- ▶ Validate outputs before customer use

Getting Started

Requirements

- ▶ Python 3.10 or newer
- ▶ pip and venv support
- ▶ Modern web browser
- ▶ RVTools export files (.xlsx/.xlsm)

Quick Start

- ▶ Windows: Install-and-Start.bat
- ▶ Later: Start-AnalytiX.bat
- ▶ Opens <http://127.0.0.1:8765>
- ▶ Install-only: Install-only.bat
- ▶ macOS/Linux: unix/install-and-start.sh
- ▶ Later: unix/start-analytiX.sh
- ▶ Or: ./start.sh from project root
- ▶ chmod +x scripts once if needed

Manual and CLI Usage

- ▶ Manual: venv, pip install, run server
- ▶ CLI: analytx_report.py folder output.docx
- ▶ CLI processes a folder of spreadsheets
- ▶ Useful for scripting and automation

VMAnalytic

What Is VMAnalytic?

- ▶ Web app for VMware inventory analysis
- ▶ RVTools exports or live vCenter input
- ▶ Migration risk scoring and estimation
- ▶ Charts, tables, and execution logs

VMAnalytic Key Features

- ▶ Inventory overview and execution logs
- ▶ Migration risk scoring per workload
- ▶ Migration duration estimation
- ▶ OpenShift install-config helper tab

VMAnalytic Getting Started

- ▶ Python 3.12+, Flask on port 5000
- ▶ Start-VMAnalytic.bat or .sh helpers
- ▶ Production: Gunicorn, Waitress, Docker
- ▶ k8s manifests available in repo

AnalytiX vs VMAnalytic

Purpose and Output

- ▶ AnalytiX: customer Word report
- ▶ Output: structured .docx brief
- ▶ Focus: discovery documentation
- ▶ FastAPI, port 8765
- ▶ VMAlytic: deep VM analysis
- ▶ Output: charts, scores, tables
- ▶ Focus: risk and estimation
- ▶ Flask, port 5000

Input and Deployment

- ▶ AnalytiX: RVTools .xlsx/.xlsm only
- ▶ Local-only by design
- ▶ CLI batch mode available
- ▶ Python 3.10+
- ▶ VMAntalytic: RVTools or vCenter
- ▶ Local, server, or Docker deploy
- ▶ rvtools-csv-parser, pattern tools
- ▶ Python 3.12+ recommended

When to Use Which Tool?

- ▶ AnalytiX – generate customer description fast
- ▶ VMAlytic – score risk and estimate duration
- ▶ Use both: report plus deep analysis
- ▶ Both accept workshop RVtools exports

VMAnalytic Repository

- ▶ [VMA-ILT/vmanalytic on GitHub](#)
- ▶ vm_analysis/ – core analysis engine
- ▶ web/ – Flask application UI
- ▶ Also GPL-2.0, provided as is

License and Disclaimer

License

- ▶ Free software under GPL-2.0
- ▶ Redistribute and modify freely
- ▶ Modified versions must stay GPL-2.0
- ▶ Full license text in LICENSE file

Disclaimer

- ▶ Provided as is, without warranty
- ▶ Use entirely at your own risk
- ▶ Validate outputs before relying on them
- ▶ No support, helpdesk, or SLA

Repository

- ▶ [VMA-ILT/analytx on GitHub](#)
- ▶ [VMA-ILT/vmanalytic on GitHub](#)
- ▶ Do not commit .venv or customer data
- ▶ README files have full setup instructions

Key Takeaways

- ▶ AnalytiX: RVtools to Word report
- ▶ VMAlytic: risk scoring and charts
- ▶ Complementary tools for VMA workflow
- ▶ Both GPL-2.0 – use at your own risk

Thank You

Questions? Try both tools with your RVtools export.
